GOVERNMENT WHITEWASH.

We give below the formula for government whitewash. We believe this should be published at least once each year to encourage its use on the farm. This is the season when stables, cellars, fences and other structures should be white washed. Paint is usually expensive, hence the demand for a serviceable whitewash that can be used as a substitute. Coloring matter may be added if the user so desires. Take a half a bushel of unsalted lime, slack in warm water, cover it during the process to keep in the steam; strain the liquid through a fine sieve or strainer; add a peck of salt previously dissolved in warm water; three pounds of ground rice boiled to a thin paste and stirred in boiling hot; half pound of powdered Spanish whiting and a pound of glue which has been previously dissolved over a slow fire. Add five gallons of hot water to the mixture, stir well and let it stand for a few days, covered to keep out the dirt, strain carefully and apply hot.

Drive It Into the Barn

AS we told you, a Low Cloverleaf gives the manure a double beating. It also spreads manure eight feet wide or better. But the wonderful thing is that it does this from a box only 45 inches wide. The spreader itself is so narrow that it can be driven into any modern barn and loaded from the gutters. Only one handling of the manure for the quickest, best job of spreading you ever did. How does that sound to you?

If you have even begun to think about buying a spreader, see this Low Cloverleaf. You will say you never saw a better manure spreader. It won't take long to look it over. Your dealer has one set up for you to see.
